

The Original Caravan Mover by Truma

Original Mover

Suitable for single axle caravans. The latest version of the Original Mover uses the most recent PCB/ electrics and handsets that run on an FM signal and the quality of the gritted roller has been much improved.

Introduced as a revolutionary new product to the caravan industry in 1997, the Original Caravan Mover led the way to one of the biggest after sale markets and one of the most common place 'add-ons' to caravans today.

Truma adopted the caravan mover when taking over Carver 10 years ago and now offer the Original design as our 'entry level' caravan mover to compete alongside the cheaper alternatives you now see on the market. Although the original is more cost effective, it does not lack quality. With new PCB and handset frequencies and improved gritted roller material, the original is still sold in large quantity throughout the UK.

To make your search for the right caravan mover for you easier, please see the key feature bullet points below.

- For use on single axle caravans.
 - Powerful drive for caravans up to 1600KG in weight, even on difficult surfaces and uneven terrain (including gravel, sand, grass, tarmac, snow and many others).
 - Is fitted using a clamp system meaning NO requirement to drill or weld anything to the caravan chassis. (This also makes the mover interchangeable when swapping caravan!)
 - Radio remote control for safe and accurate manoeuvring using an FM signal.
 - Simple 12V electrical installation utilising your existing leisure battery.
 - Cross actuation kits available to enable you to engage both drive rollers from one side of your caravan.
 - Enables to move your caravan around its axis (360°).
 - Improved and durable gritted rollers for tyre friendly use.
-
- Weight 30KG (plus an additional 5KG if opting for cross actuation).
 - Average power consumption of 15A.
 - Quiescent current consumption: >15mA.

- A 1200KG climbing capability on a 25% gradient.
- Operational speed of approx 30 cm/sec.
- Recommended battery of 85Ah minimum.
- Maximum tyre width: 205mm.
- Spring loaded cross actuation using an engagement bar.
- Good ground clearance minimising the risk of catching your caravan mover.
